

# Seat Locations

The platform is a dynamic environment in which the different elements must work together to allow easy movement of passengers. The defined seat locations across Circle Line are outlined below.

## GENERAL

Refer to the Competition Details and Entry for general requirements

The location and arrangement of the seating is dependant on the site conditions and will need to consider the following:

- Circulation of passengers.
- Position of escalators, staircases and lifts.
- Relationship and interfacing with any adjoining columns.
- Positions and integration of power points and fire extinguishers adjacent or connected to the seating.
- Position in relation to any freestanding or directional signage.
- View across the platform.

The seating within the area shown could be configured as individual seats, combined as benches, arranged in a row, arranged back to back, separated into smaller groups etc.

## TYPICAL PERSPECTIVES OF THE PLATFORM
